The standard computer models for 2014 are the Dell 9020 desktop, Dell e6440 laptop, Apple 21.5" iMac desktop and Apple 13" Mac Book Pro laptop or Apple 13" Mac Book Pro with Retina Display (see important distinctions below).

Keep in mind that Dell and Apple are continuously modifying their lines, so although the models will stay the same some of the internal components may get slight upgrades over the course of the year.

The Dells come with Windows 7 (we're holding off on Windows 8 for at least a year), the Macs come with 10.9 Mavericks.

**Dell Optiplex 9020**
- 3.2ghz fourth generation Core i5 processor
- 8gb RAM
- 500gb hybrid harddrive
- 23" widescreen monitor
- DVD burner

**Dell Latitude e6440**
- 2.6ghz fourth generation Core i5 processor
- 8gb RAM
- 500gb hybrid harddrive
- 14” screen
- built in webcam
- DVD burner

Apple 21.5” iMac
- 2.7ghz Core i5 processor
- 8gb RAM
- 1TB harddrive
- 21.5” screen
- NO DVD drive (you may request a USB external)

Apple 13” Mac Book Pro OR Apple 13” Mac Book Pro with Retina Display

The Retina model comes with a smaller but faster 256gb harddrive (SSD), a higher resolution display and does not have a DVD drive (you may request a USB external). If you have the need to store more than 200gb of data on your laptop, the standard Pro model should be selected rather than the Retina

- 2.5ghz Core i5 processor  Retina: 2.4ghz Core i5 processor
- 8gb RAM  Retina: 8gb RAM
• 500gb harddrive  Retina: 256gb SSD
• 13.3" screen  Retina: 13.3" retina screen
• DVD burner
