

You can view multiple calendars on your iPhone or iPad, either at the same time or by switching back and forth.

Follow these steps after you have added your GAE email account - if you have not done so yet please follow the guides at <http://oit.williams.edu/files/2014/06/iPhone-iPad-2.pdf> .

First you log in to your GAE account through Chrome to see what calendars are available to you.

<https://www.google.com/calendar/iphoneselect>

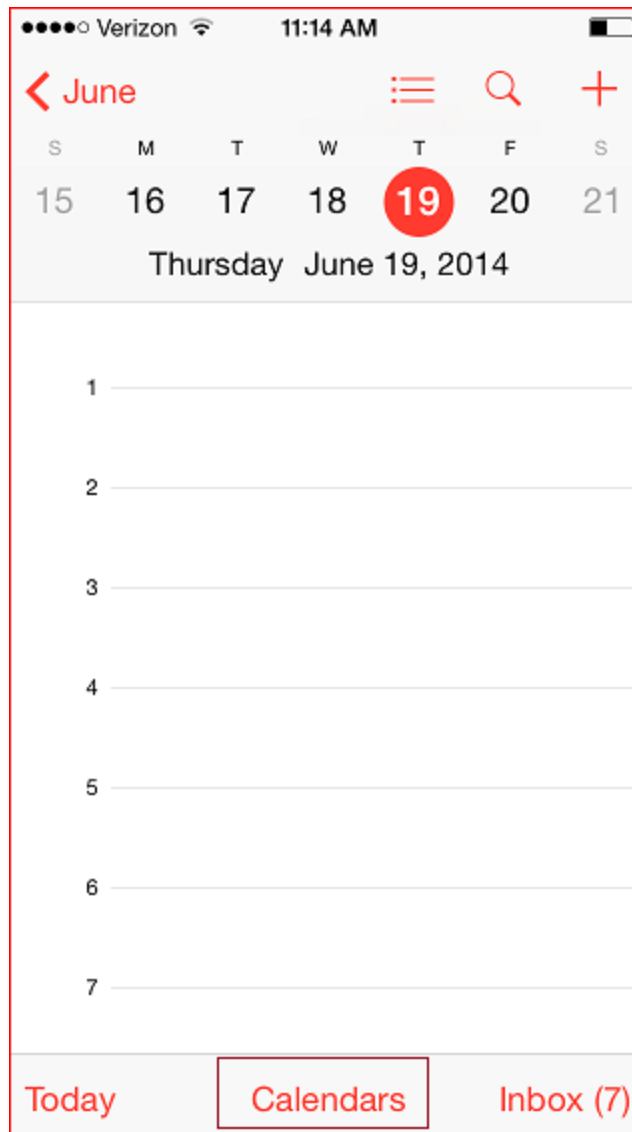

- The calendars under **My Calendars** are ones that you own or you created. Check the ones you would like to have available on your iPhone or iPad.
- The calendars under **Shared Calendars** are ones which have been shared with you and which show up as “**Other Calendars**” in the web Calendar program. Select the ones you would like to have available on your iPhone or iPad.

- Scroll down to the bottom of the web page and click **Save**

- There will probably be a delay between the time you click Save and when your iPhone will be updated. You can check your Calendar options now, or check back later.
- From your iPhone or iPad open your **Calendar** app.
- Click **Calendars** at the bottom

- Click on the **Calendars** you would like to view. Choosing multiple will overlay them in the Calendar app with colors matching the choices. You can even choose Show All Calendars from the top.
- If you'd like to avoid confusion, choose only one Calendar and switch back and forth from here.
- Note that **NotifyLink** should **not** be an option - if it is then you will want to remove it by following the guide <http://oit.williams.edu/files/2014/06/RemoveNotifyLinkfromiPhones.pdf>
